

HealthKite is a telehealth platform based on a proven, flexible and secure technology stack.

HealthKite connects patients with their caregivers and enables the seamless collection and transmission of healthcare data from Bluetooth-connected medical devices through to the clinical care team who actively monitor the physiological and patient reported outcome (PROM) data in real time.

HealthKite Hub

The Hub or tablet is issued to the patient in a kit, along with a selection of biometric devices.

The Hub is set up in the patients home and prompts them when a telehealth activity is scheduled.

- Tablet or MedHub options available
- Simple and intuitive user interface
- Low cost tablet hardware
- Supplied with low-cost ARTG listed medical devices
- Option for capture and transmission of health data via Bluetooth

HealthKite Portal

The web-based portal provides the remote care team with real-time access to vital patient data

- User interface allows monitoring of patients and groups in a single window
- Operators can manage care programs and remote in-home devices
- Engage and interact with patients via direct messaging or live video chat
- Accessed via a standard web browser
- Modern and intuitive user interface

Benefits

- Identify early warning indicators and trends requiring intervention
- Better educated, informed and engaged patients
- Improved clinical decision-making
- Reduction in the total cost of care
- Improved patient outcomes
- Reduction in ED Presentations and hospitalisations
- Reduction in home visits by nurse
- Reduced risk of hospital acquired infections or complications
- Patient convenience
