

eCaptis is a remote patient monitoring platform designed to securely capture and report patient reported outcome measures (PROMs) and experience measures (PREMs). The platform uses in-depth patient-specific questionnaires and real-time feedback to provide the foundations necessary for rapid clinical intervention. Measures captured from eCaptis can be used to increase positive engagement between patients and clinicians and improve quality of life and symptom treatment in patients.

How does it work?

Patient records are created in eCaptis (or accessed from a third-party database via integration) and those patients are assigned health questionnaires based on the health services they have accessed and/or conditions they may have. eCaptis periodically issues hyperlinks (via SMS) to select patients, prompting them to complete these brief health questionnaires via a secure web app using their personal mobile device.

Their responses are transmitted to the cloud-based Care Team Portal where the data is presented in the form of a live dashboard and exportable reports.

The system can be configured for research/population health reporting or as live monitoring system geared towards intervention. PROM or PREM scores exceeding predefined thresholds are flagged and promptly addressed by the patient management team and/or care team.

eCaptis is built on our multi-vertical platform called 'Modulus' which is designed to manage user accounts, patient data, intervention workflows, rules and escalations. The platform is highly secure and boasts a degree of infinite scalability.

Despite being offered as a standalone solution, eCaptis has also been designed to accommodate the need for integration to other applications, systems and records, via HL7 interface.

The Web Application

Operated by patients

- Users regularly receive an SMS prompting the completion of health questionnaires
- Health questionnaires completed in minutes
- Seamless user experience - accessed via personal mobile device
- Native mobile application not required - accessed via web browser

The eCaptis Portal

Operated by clinicians, care teams or researchers

- Create, customise and assign PROM and PREM questionnaires
- Scheduled tailored health questionnaires on a per-condition basis
- View, assess and report on patient data in real time
- Escalate and respond to alerts requiring intervention
- Manage patient records

Benefits of eCaptis

- Attain actionable health insights in real time
- Seamlessly assess patient health outcomes
- Improve levels patient engagement and experience
- Assess patient and carer satisfaction
- Reduce administration through scheduling and automation
- Access and report on population health data for research
